COSC1112/1114: Operating Systems Principles

Lab 2 (week 3)

1. How do you get the specifications of a Unix or C function via the terminal screen?

2. Create a C language program that can read the provided *TOP500_201406.csv* file using *fgets()* and simply print it out i) on screen and ii) in a text file.

3. Extend the code in 2 to tokenize the data using *strtok()* such that you can only print Rank column and Name column out i) on screen and ii) in a text file.
